Kansas Assistive Technology Guidance for Schools

The Kansas Assistive Technology Guidance for School is being created in response to a need expressed by Kansas' school administrators and educators for high-quality examples of the processes that individual school districts and IEP teams can use to provide legal, effective, and ethical assistive technology (AT) services. Development of the guidance is led by Kansas Infinitec, sponsored by the Kansas State Department of Education.

The Kansas Assistive Technology Guidance for School Districts can be tailored to local services. The guide is envisioned as a starting point for the development of a specific agency’s AT services. Any part of the guidelines can be copied or revised for use by an individual program or agency.

The goal of the High Quality Instruction within Inclusive Learning Environments project is to increase access to general education curriculum for all learners through the collaborative integration of technology in inclusive environments by providing structured, ongoing professional learning and development systems. This combined interactive training/meeting aims to increase capacity through supporting connections across Assistive Technology, Universal Design for Learning, and Co-Teaching project strands. In the morning, we will spend our time learning and networking together to further the mission.

The afternoon will be reserved for indepth learning on the KS AT Guidance Document.
